

MAROUANE SOUABNI

MERN Stack Internship Candidate | Full-Stack Web Developer

Fes, Morocco | +212 6 87 15 76 47 | sbnmarouan@gmail.com | [LinkedIn](#) | [GitHub](#)

Profile

Computer science and software engineering student focused on **MERN stack development**. Experienced through academic and personal projects in building React interfaces, REST APIs with Node.js/Express, JWT-based authentication, and MongoDB and Mongoose data models. Strong foundation in object-oriented programming, algorithms, debugging, and clean code. Seeking a **MERN Stack internship** to contribute to real web products while growing quickly in a professional engineering team.

Technical Skills

MERN Stack	MongoDB, Express.js, React.js, Node.js, Mongoose, RESTful APIs, CRUD applications, JWT authentication
Frontend	JavaScript ES6+, HTML5, CSS3, Sass, responsive web design, component-based UI development
Backend	API design, routing, middleware, authentication flows, server-side validation, MVC-style organization
Tools & Workflow	Git, GitHub, NPM, Postman, VS Code, terminal, Nano, Eclipse, IntelliJ IDEA, Code::Blocks
Programming	JavaScript, Java, C, C++, Python, PHP, object-oriented programming, data structures, algorithmic problem solving
Currently Learning	TypeScript basics, React Router, Redux Toolkit, Tailwind CSS, Jest, React Testing Library, Docker basics, Vercel/Render deployment

Projects

CAN Morocco 2025 Reservation Platform

MERN Prototype / MVP

Web application for managing reservations related to stadiums, fan zones, and hotels.

- Designed a reservation flow covering multiple resource types: stadium access, fan-zone capacity, and hotel booking options.
- Built the backend structure with **Node.js** and **Express.js**, organizing routes and REST endpoints for maintainable API development.
- Modeled flexible reservation data with **MongoDB** and **Mongoose**, preparing the application for changing event and booking requirements.
- Developed a responsive user interface with **React.js**, focusing on clear navigation and a simple user journey for supporters.
- Applied MERN internship-relevant concepts including CRUD operations, API testing with **Postman**, authentication planning, and Git-based version control.

Centralized Data Management System

Java Academic Project

Object-oriented application for organizing and manipulating business entities.

- Implemented a structured **Java OOP** architecture to separate entities, business logic, and data manipulation responsibilities.
- Practiced terminal-based development and script corrections using **Nano**, improving debugging discipline and environment familiarity.
- Strengthened fundamentals in software design, code organization, and algorithmic problem solving transferable to backend development.

Education

Diploma in Computer Development and Software Engineering

2023 – Present

FSDM, Fes, Morocco

- Coursework and projects focused on software engineering, full-stack web development, object-oriented programming, and database fundamentals.
- Academic project experience with **C/C++**, **Java**, **PHP**, and modern web technologies.

MERN Internship Readiness

- Able to build and debug full-stack features across React components, Express routes, MongoDB models, and API integration.
- Comfortable learning new tools quickly and preparing for team practices such as clean Git commits, code reviews, testing basics, and deployment workflows.
- Interview preparation focus: TypeScript fundamentals, Redux state management, React testing, Docker basics, and production deployment of MERN projects.

Languages and Interests

Languages: Arabic, French, English technical communication.

Interests: Web development, open source, robotics, servo motors, technology watch.
